Password Protect your Computer using the Screen Saver Option

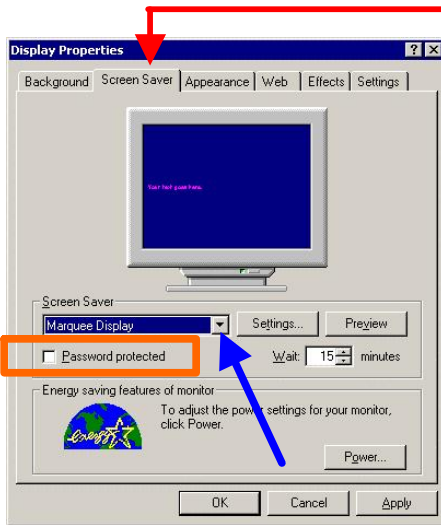

- Right click on the desktop.

- Scroll down and select properties.

You will see this window pop up.

- Click on the **Screen Saver** tab.

- Select a **screen saver** using the drop down arrow.

- Decide on a time period (15 minutes is standard.)

Now **click** in the box next to **Password Protect**.

From now on- after 15 minutes of inactivity- your selected screen saver will come up on your screen. When you jiggle the mouse your Novell Login window will come up where you will enter you Novell Login Password.

This will keep anyone from getting into your computer while you are away at your desk.
